

Founded in 1999, Speedwell Weather provides weather data, forecasts, software, and consultancy to the energy, commodity and weather risk markets.

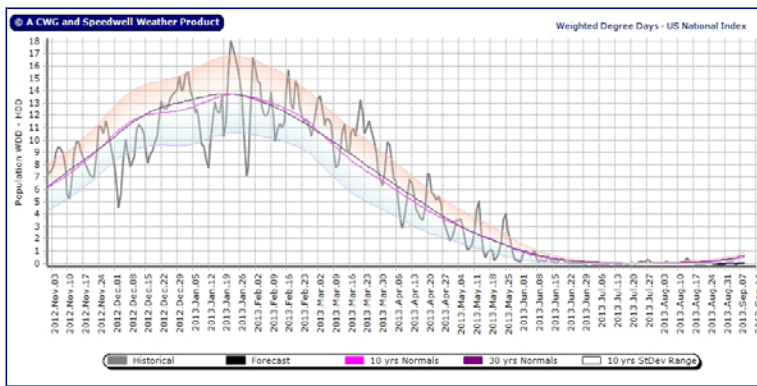

Some of our new developments over the past few months...

Weighted Degree Days (WDD)

As we approach winter the importance of weighted degree days comes back to the forefront. We have two primary developments on this product line:

U.S. WDDs We are in the process of upgrading our U.S. weighted degree-day product to reflect more recent population statistics. This product, jointly produced with the Commodity Weather Group (CWG), is available for trial on request.

(below: SpeedwellWeather.com, WDD Tracker)

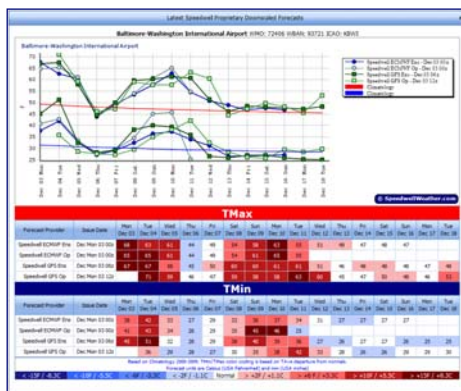

International WDDs are now available for Europe as a whole and many individual European countries. For each index we are providing the following:

- Historical index values, daily index value updates
- 15-day downscaled forecasts based on the 15-day ECMWF and GFS models and the 32-day ECMWF model
- For HDD, CDD, TMin, TMax and TAvG

Forecast SuperPack

This service provides unlimited access to the following:

- Over 1,000 downscaled forecasts world-wide
- Speedwell downscaled 15-day forecasts of daily temperature and precipitation based upon the ECMWF and GFS forecast models.
- Access to the Forecast Dashboard, FastCast™, and the Graphical Forecast Viewer
- Unlimited access to commodity index forecasts
- Provision of full ensemble
- Speedwell downscaled ECMWF monthly

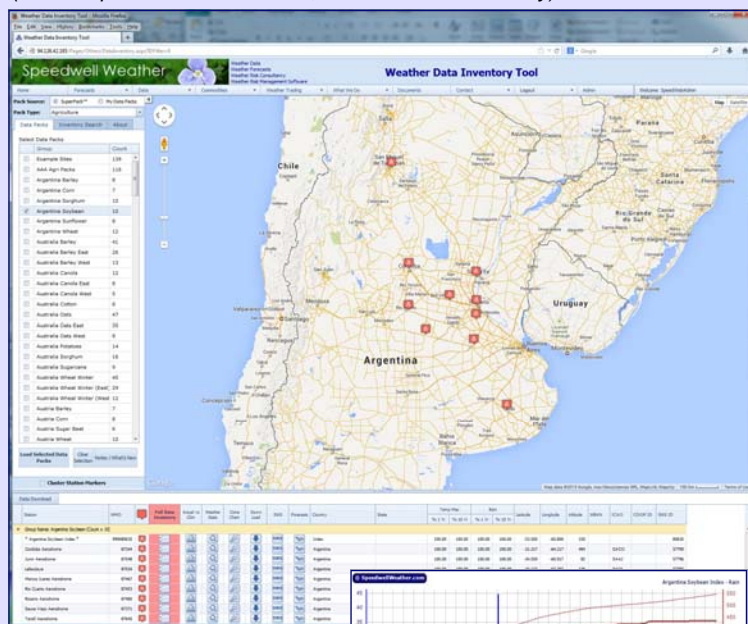

Expanded Global Commodity Tracking

We continued to expand our weighted-basket groups that are relevant for tracking the impact of weather on various commodities. Our primary focus is agriculture but we have now expanded into renewables, transport, energy, mining...

The latest data packages can be viewed at: www.SpeedwellWeather.com, "Key Features" (right side)

(below: SpeedwellWeather.com, Weather Data Inventory)

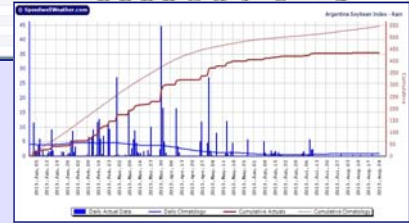

For each pack we provide the following:

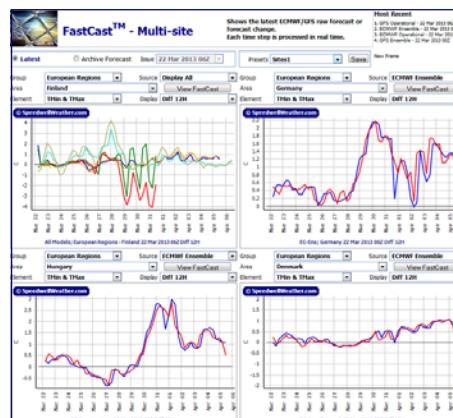

- Cleaned historical data
- Ongoing cleaned feeds
- 15-day forecasts

(Speedwell downscaled ECMWF & GFS)

These packs can also be viewed on our web-site tools including Actuals-vs-Climatology (see above image)

FastCast™ Multi-Site

Updated as each time step of the forecast model is released, FastCast presents the change in forecast graphically and numerically.

The new Multi-Site FastCast screen allows the user to track four areas simultaneously.
